

# Unit 4 Study Guide

Name Key S \_\_\_\_\_

1)  $\triangle ABC$  is dilated by a scale factor of 3.5, what is the new point of C'?

$C = (-3, 3)$   $k = 3.5$   
 $\rightarrow 3.5(-3, 3)$   
 $C' = (-10.5, 10.5)$

Given:  $\overline{MJ} \cong \overline{KL}$ ,  $\overline{ML} \cong \overline{KJ}$ , **PROVE**  $\angle J \cong \angle L$

	Statements	Reasons
A.	$\overline{MJ} \cong \overline{KL}$	Given
B.	$\overline{ML} \cong \overline{KJ}$	Given
C.	$\overline{MK} \cong \overline{MK}$	Reflexive
D.		
E.	$\angle J \cong \angle L$	CPCTC

3) Given:  $\overline{NO} \parallel \overline{MP}$  and  $\overline{MN} \parallel \overline{OP}$

Prove:  $\overline{MN} \cong \overline{OP}$

Steps	Statements	Reasons
1	$\overline{NO} \parallel \overline{MP}$ and $\overline{MN} \parallel \overline{OP}$	Given
2	$\angle MNP \cong \angle OPN$	Alt. Int. $\angle$ s
3	$\angle NPM \cong \angle ONP$	Alt. Int. $\angle$ s
4	$\overline{NP} \cong \overline{NP}$	Reflexive
5	$\triangle MNP \cong \triangle OPN$	ASA
6	$\overline{MN} \cong \overline{OP}$	CPCTC

4) Given: E is the midpoint of  $\overline{AC}$  and  $\overline{DB}$

Prove:  $\triangle ABE \cong \triangle CED$

Steps	Statements	Reasons
1	E is midpoint of $\overline{AC}$ + $\overline{BD}$	Given
2	$\overline{AE} \cong \overline{EC}$	Def of midpoint
3	$\overline{DE} \cong \overline{EB}$	Def of midpoint
4	$\angle AEB \cong \angle CED$	Vertical
5	$\triangle ABE \cong \triangle CED$	SAS

5)  $\triangle DEF$  and  $\triangle UV$  are congruent triangles. Which statement is known to be true?

a.  $\overline{DE} \cong \overline{TU}$  ✓

c.  $\overline{DF} \cong \overline{UV}$  ✗

b.  $\overline{DF} \cong \overline{TU}$  ✗

d.  $\overline{DE} \cong \overline{TV}$  ✗

6) Determine the dilation scale factor.

7) Find the missing side, ?.

$H = (0, 2)$   
 $H' = (0, 3)$   
 $K = \frac{\text{New}}{\text{Old}} = \frac{3}{2}$   
 $K = \frac{3}{2}$  or 1.5

$\frac{25}{15} = \frac{?}{24}$

$24 \cdot 25 = 15 \cdot ?$

$600 = 15 \cdot ?$   
 $\frac{600}{15} = \frac{?}{15}$

$? = 40$

Determine if the triangles are similar by AA, SAS or SSS. Otherwise, write Not Similar. Show your proportions.

8)

$\frac{12}{15} = \frac{12}{15} = \frac{8}{10}$   
 $.8 = .8 = .8$

SSS ~

9)

AA ~

$\triangle ABC \sim \triangle DEF$

10)

$\frac{8}{10} = \frac{16}{20}$   
 $.8 = .8$

SAS ~

11)

$\frac{15}{12} = \frac{10}{12}$   
 $.8\bar{3} = .8\bar{3}$   
 SAS ~

$\triangle ABC \sim \triangle DEF$

12) If  $\overline{DE} = 3x - 15$  and  $\overline{AC} = 30$ , find x.

$3x - 15 = \frac{30}{2}$

$3x - 15 = 15$

$3x = 30$

$x = 10$

13) Find the length of X.

$\frac{6}{7.5} = \frac{X}{45}$   
 $270 = 7.5X$   
 $\frac{270}{7.5} = \frac{?}{7.5}$

$X = 36 \text{ ft}$

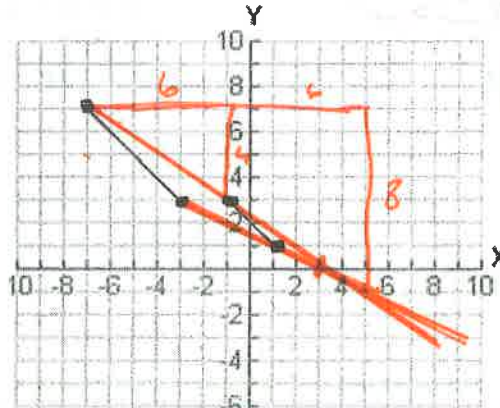

14) In the triangles shown,  $\triangle ABC$  is dilated by a factor of  $\frac{3}{5}$  to form  $\triangle XYZ$ . Given that  $m\angle C = 45^\circ$  and  $m\angle A = 35^\circ$ , what is  $m\angle Y$ ?

$m\angle Y = 100^\circ$

15) The line on the left was dilated by a scale factor of  $\frac{1}{2}$ . Approximate the point of dilation.

Center (5, -1)

- 16) The triangles at the right are similar. Complete the similarity statement using the figures below.

$\triangle LMK \sim \triangle$  ~~GHJ~~  
HGJ

- 17)

Given  $\triangle KLM \sim \triangle JHG$ , find  $x$ .

$$\frac{x-3}{3} = \frac{x+2}{4}$$

$$4x-12 = 3x+6$$

$$-3x+12 \quad -3x+12$$

$$x = 18$$

- 18) If a tree casts a 24-foot shadow at the same time that a yardstick casts a 2-foot shadow, find the height of the tree.

$$\frac{2}{3} = \frac{24}{x}$$

$$x = 36$$

- 19) On level ground, the base of a tree is 30 ft from the bottom of a 33-ft flagpole. The tree is shorter than the pole. At a certain time, their shadows end at the same point 71 ft from the base of the flagpole. How tall is the tree?

$$\frac{x}{33} = \frac{41}{71}$$

$$71x = 1353$$

$$x = 19.06 \text{ ft}$$

- 20) If the **area** of a triangle gets smaller from a dilation, write an example of a scale factor that would create this transformation.

$K = \text{any } \# \text{ smaller than } 1$   
but bigger than 0

Ex. 3, .5, .9

- 21) If the **perimeter** of a triangle gets larger from a dilation, write an example of a scale factor that would create this transformation.

$K = \text{any } \# \text{ bigger than } 1$

Ex 1.5, 3, 19, 2.8

- 22) If a rectangle is dilated by a scale factor of 7 how much larger will the **PERIMETER** of the new shape be when compared to the original?

Perimeter is 1 dimensional  
so it will be the same  
Scale factor to the power  
of 1

$$K = 7^1 = 7$$

so perimeter is 7 times larger

- 23) If a rectangle is dilated by a scale factor of 7 how much larger will the **AREA** of the new shape be when compared to the original?

Area is 2 dimensional  
so it will be the same  
scale factor to the power  
of 2

$$K = 7^2 = 49$$

so Area is 49 times larger
